

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

01 Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use a technical context · Console Status Check

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;
```

```
class Program
```

```
{
```

```
    static void Main()
```

```
    {
```

```
        Console.WriteLine("What is your name?");
```

```
        string userName = Console.ReadLine();
```

```
        Console.WriteLine("Hello, " + userName);
```

```
    }
```

```
}
```

Library	Class	Main method	Prompt	Input + variable	Output
---------	-------	-------------	--------	------------------	--------

03 Explain each label in your own words.

Class

A container that groups related code.

The class is not supplied by the compiler in the code shown. It is written by the programmer.

Main method

The method where the console program begins.

So label static void Main() as the beginning.

Method / function

A named action. In C#, a function inside a class is called a method.

Method: Console.WriteLine — its job is to display text on the screen.

Variable

A named place that remembers a value.

Username remembers the text the user types as their username.

Console.WriteLine

Displays a line of text in the console.

`Console.WriteLine` displays text on the screen (console).

Console.ReadLine

Waits for typed input and returns that text.

`Console.ReadLine` waits for the user to type something and press Enter. It then gets that typed text.

04 Trace the data.

INPUT

Their username

VARIABLE

username

OUTPUT

The username they typed

o5 Plan your pathway version.

What will you replace or add after the tutorial app works?

The app will ask about the user's career or education goal, store their answer, and respond with a short personalized message about their goal.

Optional ways to go beyond the tutorial

- ☐ Another prompt
- ☐ A decision or conditional
- ☐ ASCII art in the console
- ☐ An image in README.md
- ☐ Another tested feature

o6 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
